

Lid denester with a vertical storage tube. Adjustable to the diameter of the bucket and its height, adapted to buckets and lids, equipped with a level sensor for lids in the tube (buckets and lids dedicated to automatic packaging). The denester has a smooth regulation of the speed of feeding the buckets. Most used in automatic or semi-automatic production lines for packing into buckets.

The lid closing station is designed for closing various types of buckets and containers. The shape of the container (bucket) can be any, and the smooth adjustment of the position of the upper roller allows you to close containers of different heights. The presser is installed on its own conveyor belt and has a smooth adjustment of the belt speed.

■ KEY BENEFITS:

- automate your production;
- increase the capacity up to 1500 pcs. / h.;
- possibility of working with lids for buckets of various shapes and structures;
- open design = easy maintenance;
- the device can be a part of a technological line, as well as works independently;
- easy and operator-friendly system of changing the lid to another type;
- the possibility of feeding lids to buckets from 1l - 40l.
