

Single bucket denester with vertical storage tube. Adjustable to the diameter of the bucket and its height, equipped with a level sensor for buckets in the tube (buckets dedicated to packing in an automatic cycle). The denester has a smooth regulation of the speed of feeding the buckets. Most often used in automatic or semi-automatic lines for packing products into buckets.

### ■ KEY BENEFITS:

- automate your production;
- increase the capacity to 800 pcs. / hour;
- the ability to work with buckets of various shapes and structures;
- open design = easy maintenance;
- the device can be a part of a technological production line, as well as works independently;
- easy and operator-friendly system of changing the bucket to another type;
- the possibility of feeding buckets in the range of 1 ÷ 40 l.

Double bucket denester with vertical storage tube. Adjustable to the diameter of the bucket and its height, equipped with a level sensor for buckets in the magazine (buckets dedicated to packing in an automatic cycle). The denester has a smooth regulation of the speed of feeding the buckets. Most often used in automatic or semi-automatic lines for packing products into buckets.

### ■ KEY BENEFITS:

- automate your production;
- increase the capacity to 1,600 pcs. / hour;
- the ability to work with buckets of various shapes and structures;
- open design = easy maintenance;
- the device can be a part of a technological production line, as well as works independently;
- easy and operator-friendly system of changing the lid to another type;
- the possibility of feeding buckets from 1l - 40 l.
